PROFILE

Data Scientist and AI Engineer with 3.7 years of IT experience, focused on applying Machine Learning, Deep Learning, NLP and Generative AI to real-world problems across Telecom, Manufacturing and FMCG domains. Skilled in Python, statistical analysis, and modern AI frameworks, with hands-on experience building RAG-based assistants, predictive models, and automation solutions that improve accuracy, efficiency, and business decision-making.

EXPERIENCE

- DXC Technology, Hyderabad || Analyst – Data, AI & Infra Services **May 2025 – Present**
- HCL Technologies, Hyderabad || Analyst **April 2022 - May 2025**
- HCL Technologies, Remote || Internship **November 2021 - April 2022**

TECHNICAL SKILLS

- Generative AI:** Transformers, LLMs, Prompt Engineering, RAG, Hugging Face, Langchain, LangGraph, Pinecone, FAISS, Chroma VectorDBs
- Deep Learning & NLP:** ANN, RNN, LSTM-RNN, GRU, BERT, Transfer Learning
- Machine Learning:** Linear, Logistic Regression, KNN, K-Means, Decision trees, Random Forest, Adaboost
- Languages & Libraries:** SQL, Python, Libraries – Scikit-Learn, TensorFlow, Keras, Langchain, NLTK, Numpy, Pandas, Matplotlib, Seaborn, Flask API
- Cloud and Other tools:** AWS & Azure, GIT, GITHUB, Terraform, Ansible, Docker, Jenkins, Jira
- Soft Skills:** Problem solving, Quick learner, Adaptability, Collaboration, Cross functional co-ordination

RESPONSIBILITIES

- Collaborated with multiple teams' engineers, SMEs, and operations teams to understand real issues and convert them into practical ML/AI solutions that could actually be used in day to day work.
- Developed different machine learning and AI solutions for clients across Telecom, Manufacturing, and FMCG, ranging from predictive models to RAG-based systems.
- Automated parts of the infrastructure setup using Terraform and Ansible, which helped reduce manual work and made deployments more consistent.
- Worked closely with DevOps and Cloud teams to create CI/CD pipelines and support smooth deployment of our AI/ML applications.

PROJECTS:

Project: AI-driven ITSM assistant for BCP/DR and incident management

- Built an AI-driven RAG assistant on AWS using LangChain, Pinecone, OpenAI embeddings, and GPT-4, allowing users to quickly access HSSE Archer and GRC Archer tool based BCP/DR information, such as RTO/RPO, DR results, issues, and infra changes without needing Archer access or training. The chatbot also supported quick lookup of change requests, incidents, and routing details, reducing query resolution time by about 40%.
- Developed a DR ingestion pipeline in Python using LangChain and OpenAI's text-embedding models to process PDFs, DR plans, Excel RTO/RPO sheets, and email-based DR summaries, reducing manual lookup efforts by 50% and improving DR compliance accuracy.

- Implemented an NLP-based incident classification and routing module using Python and LLM-driven semantic understanding, improving assignment accuracy and enabling faster SME-driven problem ticketing.
- Enabled advanced BCP/DR intelligence by indexing Archer-exported DR documents and recovery workflows in Pinecone, allowing the assistant to provide real-time answers on RTO/RPO, app ownership, last DR date, criticality, and infra changes significantly improving BIA process, audit readiness and compliance accuracy.

Project: RAG-based Technician Assistant Chatbot for Robotic Arm Reconfiguration Used In Manufacturing Industries

- Worked on a POC to Develop a RAG based chatbot on AWS to streamline robotic arm reconfiguration processes, reducing setup time for tasks like automotive radio installation and glass lifting, using Python, LangChain, LLama and FAISS.
- Built a document ingestion pipeline to convert hardware manuals, configuration guides, and software-change instructions into vector embeddings using Hugging Face models, enabling efficient retrieval.
- Implemented a context-aware LLM chatbot that provides step-by-step guidance for hardware swapping, pump attachment, calibration, and software parameter updates.
- Reduced technician dependency on lengthy manuals by >60% and minimized configuration time through instant contextual responses.
- Collaborated with multiple cross functional teams to integrate the chatbot into the internal technician support workflow, improving accuracy and standardization of robot setup procedures.

Project: FMCG Retail Sales & Demand Prediction using Machine Learning Models

- Built a Random Forest Regression model to forecast FMCG product demand, achieving a 68% improvement in prediction accuracy compared to baseline model approaches.
- Performed end-to-end data preprocessing, including handling missing values, outlier treatment, encoding categorical variables, and scaling features to ensure model stability and reliability.
- Implemented hyperparameter tuning using GridSearchCV / RandomizedSearchCV to optimize model depth, number of estimators, and split criteria, resulting in better generalization and lower error rates.
- Delivered actionable insights for demand prediction, enabling supply chain teams to optimize stock levels, reduce overstock/understock situations, and lower operational costs.
- Evaluated the model using MAE, RMSE, and R^2 scores, and compared Random Forest with other models like KNN, XGBoost and others to confirm that it gave the best performance.

CERTIFICATIONS

- AWS Certified Solutions Architect Associate (SAA C-03)
- AWS Cloud Practitioner (CLF-C02)
- Azure: MS Azure AZ-900

EDUCATION

- B.E Mechanical Engineering - Pune University with 7.94 CGPA
- HSC – Yeshwant College, Nanded – 75.23%
- SSC – Oxford English Medium School, Nanded – 92.18%

LANGUAGES KNOWN

- English
- Hindi
- Tamil
- Marathi
